Para estudiar la efectividad de un medicamento contra la diabetes se mide la cantidad de glucemia en sangre antes y después de la administración de dicho medicamento, obteniéndose los resultados siguientes:

X1 - X2: Peducción de glucerie Déferencie al former

	_:-		Λ
W0	w	щ	4

X1:	Antes	7.2	7.3	6.5	4.2	3.1	5.3	5.6
